WHAT YOU SHOULD **NOT** FLUSH & WHY!

Wipes (Yes, even the ones that say "flushable")
Even though some wipes say they are flushable and they seem to go down just fine, they actually don't dissolve like toilet paper does and can lead to massive blockages.

Personal Hygiene Products
A lot of these materials contain plastics that take a really long time to break down.

Medicines
These can not always be filtered out of our water supply and can affect our surface and drinking water.

Cigarette Butts
Since cigarette butts do not breakdown they will eventually cause blockages. They are also filled with dangerous chemicals that can contaminate the water supply.

Hair
Hair clogs up your plumbing by forming giant balls that trap odors and create massive blockages.
